

Our Commitments to More Responsible Tourism

Located in the heart of an exceptional natural environment, our beach restaurant is aware of its responsibility in preserving the coastline and the resources that surround us. Every day, we strive to balance quality service, customer enjoyment, and respect for the environment.

Promoting Local Products and Short Supply Chains

We prioritize local producers, regional suppliers, and seasonal products whenever possible. This approach allows us to support the local economy, reduce transportation, and offer our customers carefully selected, high-quality products.

Reducing Food Waste

Fighting food waste is an integral part of our operations. Our teams are trained to respect portion sizes through detailed technical specifications and the use of appropriate measuring tools. Each portion is carefully designed to guarantee customer satisfaction while minimizing unnecessary waste.

Sorting, recycling, and better managing our waste

We have implemented a selective sorting system to recover recyclable waste such as glass, cardboard, packaging, and other recyclable materials. We also strive to reduce our waste production and continuously improve its management.

Conserving Water, a Precious Resource

Because water is central to our business and our environment, we have adopted several measures to reduce our consumption:

- Dual-flush toilets.**
- Faucets equipped with mixers and flow restrictors.**
- Raising awareness among staff and customers about eco-friendly practices.**

Reusing some water, particularly water from ice buckets, for watering plants whenever possible.

Awareness signs are also installed to encourage responsible use of the beach showers.

Reducing Our Energy Consumption

Our establishment is equipped with low-energy LED bulbs, and we install motion detectors whenever technically feasible. We also train our teams to systematically switch off unused equipment to limit our energy consumption.

Involving Our Teams in Our Environmental Approach

Environmental commitment is a collective effort. Our employees are regularly trained on best practices related to waste reduction,

water and energy conservation, and coastal preservation. Every team member actively participates in this approach on a daily basis.

A Continuous Improvement Approach

Our commitment doesn't stop at the actions already implemented. As part of our continuous improvement approach and the recommendations from the "Destination of Excellence" audit, we are continuing to develop new initiatives aimed at reducing our environmental impact and raising awareness among our customers and teams.

Because preserving our environment today means ensuring that everyone can enjoy the beauty of our beach, our sea, and our region tomorrow.
